

# A Course in Model Theory I:

## Introduction<sup>1</sup>

Rami Grossberg

DEPARTMENT OF MATHEMATICAL SCIENCES, CARNEGIE MELLON UNIVERSITY, PITTSBURGH, PA 15213

---

<sup>1</sup>This **preliminary draft** is dated from August 28, 2011. The book will be published by Cambridge University Press. I plan to have a stable version of this volume by July 2011. Exercise #=648.

# Contents

Preface	7
Course outlines	15
<b>Part 1. Definability</b>	<b>17</b>
Chapter 1. Fundamentals	19
Introduction	19
1. Structures and languages	22
2. The basic concepts	38
3. On existence of models and elementary submodels	72
4. The Erdős-Rado Theorem	90
5. Applications of the compactness theorem	105
6. Joint embedding and the Amalgamation properties in first-order logic	120
7. Types and the diagram of $T$	127
8. Countable models and Henkin's omitting types theorem	139
9. Models of weak set theory	154
10. Two cardinal theorems, by Vaught, Chang, Keisler and Morley	162
11. Model complete-theories	173
12. Skolemization	182
Chapter 2. Abstract Elementary Classes	189
Introduction	189
1. Abstract Classes	191
2. Abstract Elementary Classes	203
3. The two major open questions concerning AEC	216
4. Shelah's presentation Theorem	217
5. Basic Examples	222
6. PC-classes and omitting types	226
7. $I(\aleph_0, \mathcal{K}) = I(\aleph_1, \mathcal{K}) = 1 \implies \mathcal{K}_{\aleph_2} \neq \emptyset$ .	245
8. Some extensions of first-order logic	251
9. Categoricity in $\aleph_1$ for AECs is not absolute	268
10. Random power set in higher order	282
11. $\text{Ext}_{\mathbf{Z}}^1(G, \mathbf{Z})$	283
12. Weak amalgamation	284
13. Few models imply the amalgamation property	286
Chapter 3. More Fundamentals	291
Introduction	291
1. The filter of closed unbounded sets	292
2. Ultraproducts	304
3. Ehrenfeucht-Fraissé games	318
4. Two applications to algebra	321
5. Non-standard analysis*	327

6. A mathematical introduction to the book	328
7. When does a class have a structure theory? Shelah's thesis	334
<b>Part 2. Galois Theory</b>	<b>337</b>
Chapter 4. Complete types and indiscernibles	339
Introduction	339
1. Saturated models	341
2. The monster model, homogenous and special models	354
3. Indiscernibles and Ehrenfeucht-Mostowski models	374
4. Galois types and monster models in Abstract Elementary Classes	393
Chapter 5. More on Types	405
Introduction	405
1. Definability and the Lascar group	407
2. Using models of set theory to establish consistency of a first-order theory	419
3. Game theoretic characterization of elementary embedding and isomorphism	422
4. Saturation of ultraproducts	424
5. Keisler-Shelah's theorem*	424
6. More on model complete theories*	425
7. Shelah's Generalization of Ehrenfeucht-Mostowski models	426
8. $D(T)$ as a topological space*	429
9. The topology of Lascar's groups	435
10. More on existence, omitting types, and the completeness theorem	436
11. The Paris Harrington's theorem*	441
12. More on two cardinal theorems*	442
13. Chang's conjecture and Jónsson algebras*	446
Chapter 6. Morley's Theorem	453
Introduction	453
1. Dimension in model theory	456
2. A rank function	458
3. $\aleph_0$ -stability	466
4. Existence of indiscernibles, non-splitting and cohiers	473
5. Primary models	483
6. Every model is saturated	489
7. Chang's Conjecture is true for $\aleph_0$ -stable theories	495
8. Strongly minimal sets	497
9. Quasi-minimal formulas and Lachlan's omitting types Theorem	507
10. Morley's rank and the local rank	510
11. Some properties of $ T ^+$ -categorical theories	512
12. Some properties of $\aleph_0$ -stable theories	519
13. The Baldwin Lachlan proof	520
14. Keisler's proof*	523
Chapter 7. Basics of Stability	525
Introduction	525
1. Local Types	526
2. The order dichotomy	531
3. Sequences of indiscernibles	541
4. Definability of types in stable theories	548
5. Many equivalent characterizations of stability	551
6. The independence and strict-order properties	552
7. Superstable theories	554

8. Simple Theories	555
9. Noetherian topological spaces	556
Chapter 8. Forking	559
Introduction	559
1. Forking	559
2. Forking in Simple, Stable and superstable theories	572
Chapter 9. Survey	573
Introduction	573
1. The main gap (Shelah's great theorem)	573
2. Classification theory for non-elementary classes	575
3. Geometric stability (or the fine structure theory)	575
4. Lang-Mordell	575
5. Ax and Kochen	575
6. $o$ -minimal theories	575
7. Abstract model theory	576
8. Finite model theory	577
9. Non standard analysis	577
Chapter 10. A miniguide to the literature	579
Chapter 11. Open Problems	581
Introduction	581
1. Classification theory for non-elementary classes	581
2. Shelah's categoricity conjecture	581
3. Main Gap for uncountable theories	581
4. Other problems	582
Chapter 12. Historical comments	585
<b>APPENDIX</b>	593
Chapter 13. Elementary set theory	595
Introduction	595
1. Cardinal numbers	595
2. Ordinals	598
3. Martin's Axiom	601
4. On diamonds	602
5. The small subsets of $\lambda^+$ is a normal ideal	608
6. Hajnal's free subset theorem	611
7. The building-stones of many models	614
Chapter 14. Combinatorial geometry	617
Introduction	617
1. Pregeometries (or Matroids)	617
2. Abstract dependence	625
3. Projective geometries	625
Chapter 15. Plato: The Allegory of the Cave, from book VII The Republic	627
Bibliography	633
Index	643
