Contents

Preface	9
Acknowledgments	13
Course outlines	14
Chapter 1. Fundamentals	15
Introduction	15
1. Structures and languages	17
2. The basic concepts	30
3. On existence of models and elementary submodels	54
4. The Erdős-Rado Theorem	73
5. Applications of the compactness theorem	86
6. Some extensions of first-order logic	99
7. Skolemization	111
8. The filter of closed unbounded sets	117
9. Ultraproducts	125
10. Models of weak set theory	138
11. Ehrenfeucht-Fraïssé games	144
12. Model complete-theories	146
13. Two applications to algebra*	155
14. Non-standard analysis*	161
15. A mathematical introduction to the book	162
16. When does a class have a structure theory? Shelah's thesis	167
Chapter 2. Types and indiscernibles	169

Introduction	169
1. $D(T)$ the diagram of the theory T	171
2. Saturated models	181
3. More on saturated models and the monster model	191
4. Definability and the Lascar group	201
5. Game theoretic characterization of elementary embedding and isomorphism	210
6. Saturation of ultraproducts	212
7. Keisler-Shelah's theorem*	212
8. More on model complete theories*	213
9. Indiscernibles and Ehrenfeucht-Mostowski models	214
10. Countable models and Henkin's omitting types theorem	226
11. More on omitting types	236
12. $D(T)$ as a topological space*	241
13. More on existence, omitting types, and the completeness theorem	247
14. The Paris Harrington's theorem*	252
15. Basics of two cardinal theorems	253
16. More on two cardinal theorems*	255
17. Chang's conjecture and Jónsson algebras*	258
 Chapter 3. Morley's Theorem	 263
Introduction	263
1. Dimension in model theory	265
2. A rank function	267
3. Existence of indiscernibles, non-splitting and cohiars	275
4. \aleph_0 -stability	280
5. Primary models	286
6. Every model is saturated	289
7. Strongly minimal sets	294
8. Some properties of $ T ^+$ -categorical theories	301
9. The Baldwin Lachlan proof	306

10. Keisler's proof*	308
Chapter 4. Stability	309
Introduction	309
1. Basics	310
2. The order dichotomy	312
3. Sequences of indiscernibles	319
4. Noetherian topological spaces	326
5. Ranks revisited	329
6. Characterizations of stable theories	341
7. Definability of types	344
8. On the function $D[\theta(\mathbf{x}; \mathbf{a}), \Delta, \mu^+]$	347
9. The independence and strict order properties	364
10. The finite cover property	369
11. Simple theories	371
Chapter 5. Stability in algebra	373
Introduction	373
1. Definable groups	373
2. Superstable fields are algebraically closed	374
3. Algebraic and model-theoretic dimensions	378
4. The indecomposability theorem	378
5. Model Theory of algebraically closed fields	379
6. An application to differentially closed fields*	382
Chapter 6. Forking calculus in simple theories	387
Introduction	387
1. General notion of independence	388
2. Dividing and forking	397
3. Ranks and Simple Theories	406
4. Forking in Simple Theories	413

5. Shelah's Boolean Algebra	422
6. Semi simple theories	429
Chapter 7. More stability	433
Introduction	433
1. Finite equivalence relations theorem	433
2. The stability spectrum theorem	433
3. Chains of saturated models	435
4. Canonical bases and \mathfrak{C}^{eq}	435
Chapter 8. Prime models	437
Introduction	437
1. Isolation notions and existence	437
2. Uniqueness	440
Chapter 9. Orthogonality calculus	443
Introduction	443
1. Regular types	443
2. Unidimensional theories	443
Chapter 10. The main gap	445
Introduction	445
1. stable systems	445
2. otop and dop	445
3. good systems	445
4. Tree decomposition theorem	445
Chapter 11. Morley's theorem for uncountable theories	447
Introduction	447
1. Weakly minimal formulas	447
2. Another proof	447
Chapter 12. The Hrushovski-Zilber group configuration	449

Introduction	449
1. Basics	449
2. Unidimensional theories are superstable	449
3. Laskowski's proof of categoricity	449
Chapter 13. Classification theory for non elementary classes	451
Introduction	451
1. Fundamentals	454
2. \mathcal{K} -embeddings	462
3. A substitute for saturation	469
4. Abstract classes are PC-classes	471
5. The amalgamation property and the weak diamond	474
6. On pseudo elementary classes	499
7. Types	513
8. Minimal types	521
Chapter 14. Non structure theory	523
Introduction	523
1. Unstable theories	527
2. Unsuperstable theories and Boolean algebras	528
3. Combinatorial theorems on trees	541
4. The generalized order property	548
Chapter 15. Survey	557
Introduction	557
1. The main gap (Shelah's great theorem)	557
2. Classification theory for non-elementary classes	559
3. Geometric stability (or the fine structure theory)	559
4. Lang-Mordel	559
5. Ax and Kochen	559
6. o -minimal theories	559

7. Abstract model theory	560
8. Finite model theory	561
9. Non standard analysis	561
Chapter 16. Appendix on combinatorial geometry	563
Introduction	563
1. Pregeometries (or Matroids)	563
2. Abstract dependence	570
3. Projective geometries	570
Chapter 17. A miniguide to the literature	571
Chapter 18. Historical comments	573
Bibliography	575
Index	585
