# Contents

Preface	9
Acknowledgments	13
Course outlines	14
Chapter 1. Fundamentals	15
Introduction	15
1. Structures and languages	17
2. The basic concepts	30
3. On existence of models and elementary submodels	55
4. The Erdős-Rado Theorem	74
5. Applications of the compactness theorem	87
6. Some extensions of first-order logic	100
7. Skolemization	113
8. The filter of closed unbounded sets	119
9. Ultraproducts	127
10. Models of weak set theory	140
11. Ehrenfeucht-Fraïssé games	146
12. Model complete-theories	148
13. Two applications to algebra*	157
14. Non-standard analysis*	163
15. A mathematical introduction to the book	164
16. When does a class have a structure theory? Shelah's thesis	169
Chapter 2. Types and indiscernibles	171

Introduction	171
1. $D(T)$ the diagram of the theory $T$	173
2. Saturated models	183
3. More on saturated models and the monster model	194
4. Definability and the Lascar group	204
5. Game theoretic characterization of elementary embedding and isomorphism	213
6. Saturation of ultraproducts	215
7. Keisler-Shelah's theorem*	215
8. More on model complete theories*	216
9. Indiscernibles and Ehrenfeucht-Mostowski models	217
10. Countable models and Henkin's omitting types theorem	230
11. More on omitting types	240
12. $D(T)$ as a topological space*	245
13. More on existence, omitting types, and the completeness theorem	251
14. The Paris Harrington's theorem*	256
15. Basics of two cardinal theorems	257
16. More on two cardinal theorems*	259
17. Chang's conjecture and Jónsson algebras*	262
 Chapter 3. Morley's Theorem	 267
Introduction	267
1. Dimension in model theory	269
2. A rank function	271
3. Existence of indiscernibles, non-splitting and cohiers	279
4. $\aleph_0$ -stability	284
5. Primary models	290
6. Every model is saturated	293
7. Strongly minimal sets	298
8. Some properties of $ T ^+$ -categorical theories	305
9. The Baldwin Lachlan proof	310

10. Keisler's proof*	312
Chapter 4. Stability	313
Introduction	313
1. Basics	314
2. The order dichotomy	316
3. Sequences of indiscernibles	323
4. Noetherian topological spaces	330
5. Ranks revisited	333
6. Characterizations of stable theories	345
7. Definability of types	348
8. On the function $D[\theta(\mathbf{x}; \mathbf{a}), \Delta, \mu^+]$	351
9. The independence and strict order properties	368
10. The finite cover property	373
11. Simple theories	375
12. Basics of Forking	376
Chapter 5. Stability in algebra	379
Introduction	379
1. Definable groups	379
2. Superstable fields are algebraically closed	380
3. Algebraic and model-theoretic dimensions	384
4. The indecomposability theorem	384
5. Model Theory of algebraically closed fields	385
6. An application to differentially closed fields*	388
Chapter 6. Forking calculus in simple theories	393
Introduction	393
1. General notion of independence	394
2. Dividing and forking	403
3. Ranks and Simple Theories	412

4. Forking in Simple Theories	419
5. Shelah's Boolean Algebra	428
6. Semi simple theories	435
Chapter 7. More stability	439
Introduction	439
1. Finite equivalence relations theorem	439
2. The stability spectrum theorem	439
3. Chains of saturated models	441
4. Canonical bases and $\mathcal{C}^{eq}$	441
Chapter 8. Prime models	443
Introduction	443
1. Isolation notions and existence	443
2. Uniqueness	446
Chapter 9. Orthogonality calculus	449
Introduction	449
1. Regular types	449
2. Unidimensional theories	449
Chapter 10. The main gap	451
Introduction	451
1. stable systems	451
2. otop and dop	451
3. good systems	451
4. Tree decomposition theorem	451
Chapter 11. Morley's theorem for uncountable theories	453
Introduction	453
1. Weakly minimal formulas	453
2. Another proof	453

Chapter 12. The Hrushovski-Zilber group configuration	455
Introduction	455
1. Basics	455
2. Unidimensional theories are superstable	455
3. Laskowski's proof of categoricity	455
Chapter 13. Classification theory for non elementary classes	457
Introduction	457
1. Fundamentals	460
2. $\mathcal{K}$ -embeddings	468
3. A substitute for saturation	475
4. Abstract classes are PC-classes	477
5. The amalgamation property and the weak diamond	480
6. On pseudo elementary classes	505
7. Types	519
8. Minimal types	528
Chapter 14. Non structure theory	529
Introduction	529
1. Unstable theories	533
2. Unsuperstable theories and Boolean algebras	534
3. Combinatorial theorems on trees	547
4. The generalized order property	554
Chapter 15. Survey	563
Introduction	563
1. The main gap (Shelah's great theorem)	563
2. Classification theory for non-elementary classes	565
3. Geometric stability (or the fine structure theory)	565
4. Lang-Mordel	565
5. Ax and Kochen	565

6. $\omega$ -minimal theories	565
7. Abstract model theory	566
8. Finite model theory	567
9. Non standard analysis	567
Chapter 16. A miniguide to the literature	569
Chapter 17. Historical comments	571
Appendix A. Elementary set theory	573
Introduction	573
Appendix B. Combinatorial geometry	577
Introduction	577
1. Pregeometries (or Matroids)	577
2. Abstract dependence	584
3. Projective geometries	584
Bibliography	585
Index	597
