

# Solving a Catering Problem with the Greedy Set Cover Algorithm

AJ Druck, Neha Gupta,  
Olivia Montanha, Juliette Wong

# Introduction

- 
- × The Cheesecake Factory
  - × Clients supply:
    - Number of attendees (20)
    - Dietary restrictions of attendees
    - Minimum number of dishes they want
      - 2 appetizers, 4 main dishes, 2 desserts
  - × Goal: choose set of dishes that
    - Maximizes expected revenue
    - Meets dietary restrictions of all attendees

# Data (Attendees)

Note: we created this data based on the percentages for these food allergies in the United States

- × 0 -> none (8/20 - 40%)
- × 1 -> vegetarian (2/20 - 10%)
- × 2 -> vegan (1/20 - 5%)
- × 3 -> lactose intolerant (4/20 - 20%)
- × 4 -> seafood free (1/20 - 5%)
- × 5 -> nut allergy (1/20 - 5%)
- × 6 -> gluten free (1/20 - 5%)
- × 7 -> no meat or dairy (1/20 - 5%)
- × 8 -> gluten free vegetarian (1/20 - 5%)

	Dietary Restrictions	Gluten Free	Meat Free	Dairy Free	Nut Free	Seafood Free	Egg Free
0	None	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
1	Vegetarian	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
1	Vegetarian	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
2	Vegan	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
3	Lactose Intolerant	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

# Data (Food)

- ✗ Based on our encoding of attendees, we represented each dish on the menu as a set of types of individuals who could consume that food

	Price	Gluten Free	Meat Free	Dairy Free	Nut Free	Seafood Free	Egg Free	
Parmesan Garlic Cheese Bread	8.95	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	{0, 1, 4}
Roadside Sliders	9.95	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	{0, 4, 5}
Chicken Pot Stickers	10.95	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	{0, 4, 5}
Avocado Eggrolls	11.5	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	{0, 1, 4}
Quesadilla	9.95	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	{0, 1, 4, 5}
Fried Mac and Cheese	11.5	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	{0, 1, 4, 5}
Southern Fried Chicken Sliders	10.95	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	{0, 4, 5}
Hot Spinach and Cheese Dip	10.95	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	{0, 1, 4, 5}
Tex Mex Eggrolls	10.95	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	{0, 4, 5}
Fried Calamari	12.95	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	{0, 5}
Buffalo Blasts	11.95	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	{0, 4, 5}
Sweet Corn Tamale Cakes	10.95	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	{0, 1, 4, 5, 6, 8}

# Set Cover Algorithm

- ✗ Have a universe
  - In our case it would be a set of the types of people present :  $\{0, 1, 2, 3, 4, 5, 6, 7, 8\}$
- ✗ Have a set of subsets whose union equals the universe
  - Would be the dishes
  - Ex.  $\{\{0\}, \{0, 1, 2, 3, 4, 7\}, \{0, 5, 6\}, \{0, 1, 5, 6, 8\}\}$
- ✗ Find the smallest set of subsets whose union equals the universe
  - i.e. find the smallest number of dishes that satisfies everyone (and maximises revenue)

# Algorithm

## × Greedy Set Cover Algorithm

```
def set_cover(universe, subsets, weights):  
    """Find a family of subsets that covers the universal set"""  
    elements = set(e for s in subsets.values() for e in s)  
    # Check the subsets cover the universe  
    if elements != universe:  
        return None  
  
    covered = set()  
    cover = []  
    # Greedily add the subsets with the most uncovered points  
    while covered != elements:  
        subset, bestI = maxHelper(subsets, covered, weights)  
        del subsets[bestI]  
        del weights[bestI]  
        cover.append((subset, bestI))  
        covered |= subset  
  
    return cover
```

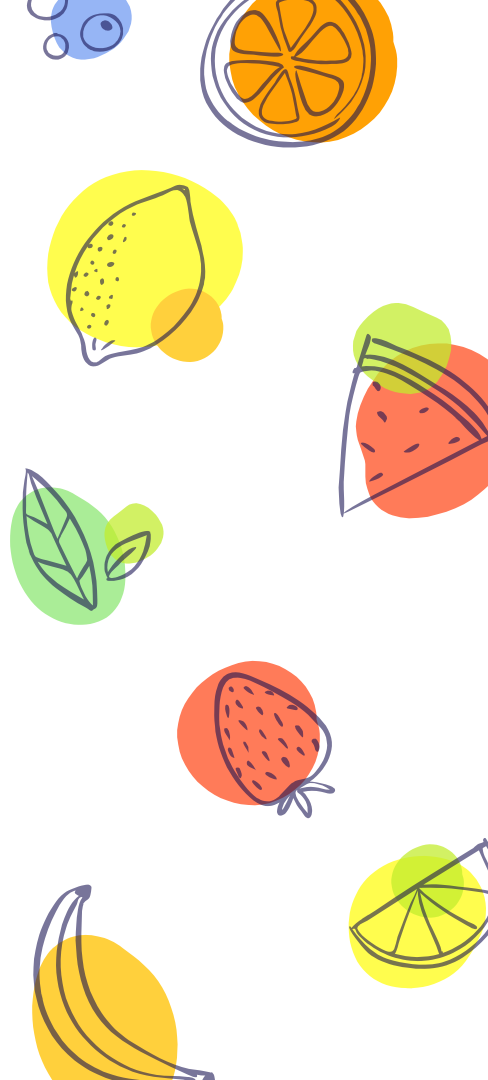

## Algorithm (cont.)

```
def maxHelper(subsets, covered, weights):  
    maxS = None  
    maxH = -1  
    bestI = None  
    for key in subsets:  
        heuristic = len(subsets[key] - covered) * weights[key]  
        if maxS == None or heuristic > maxH:  
            maxS = subsets[key]  
            maxH = heuristic  
            bestI = key  
    return maxS, bestI
```

# Results

## Appetizers:

- ✗ Factory Chopped Salad -- \$12.50
- ✗ Guacamole Made-To-Order -- \$11.95
- ✗ Factory Nachos -- \$12.50

## Results (cont.)

### Main Dishes:

- ✗ Chinese Chicken Salad -- \$14.95
- ✗ Cobb Salad -- \$14.95
- ✗ Sante Fe Salad -- \$15.50
- ✗ Four Cheese Pasta -- \$15.95
- ✗ Luau Salad -- \$14.95
- ✗ Evelyn's Favorite Pasta -- \$15.95

## Results (cont.)

### Desserts:

- ✗ Bowl of Fresh Strawberries -- \$7.50
- ✗ Dairy-Free Key Lime Pie -- \$7.95
- ✗ Godiva Chocolate Cheesecake -- \$7.95

## Results (cont)

- × We assumed that of the foods an individual can consume, they have an equal chance of choosing each dish

$E[\text{Appetizers}] = \$245.97$

$E[\text{Main Dishes}] = \$305.81$

$E[\text{Dessert}] = \$155.40$

**Total Expected Revenue: \$707.18**

**Expected Revenue/Person: \$35.36**

# Conclusion

- ✗ Compared to a visual inspection of the data, the algorithm chose the correct dishes
- ✗ This specific example can be generalized to different menus, number of attendees, number of dietary restrictions, number of dishes requested, etc.
