

# 6. Number Theory

Po-Shen Loh

CMU Putnam Seminar, Fall 2011

## 1 Classical results

**Warm-up.** Let  $p$  be a prime. Expand  $(x + y + z)^p$ , reducing the coefficients modulo  $p$ .

**Fermat.** For any prime  $p$  and any integer  $a$  not divisible by  $p$ ,

$$a^{p-1} \equiv 1 \pmod{p}.$$

**Euler.** For any positive integer  $n$  and any integer  $a$  relatively prime to  $n$ ,

$$a^{\phi(n)} \equiv 1 \pmod{n},$$

where  $\phi(n)$  is the number of integers in  $\{1, \dots, n\}$  that are relatively prime to  $n$ .

**Lucas.** Let  $n$  and  $k$  be non-negative integers, with base- $p$  expansions  $n = (n_t n_{t-1} \dots n_0)_{(p)}$  and  $k = (k_t k_{t-1} \dots k_0)_{(p)}$ , respectively. Then

$$\binom{n}{k} \equiv \binom{n_t}{k_t} \times \binom{n_{t-1}}{k_{t-1}} \times \dots \times \binom{n_0}{k_0} \pmod{p}.$$

## 2 Problems

**Observation.** Let  $p$  be an odd prime. Expand  $(x - y)^{p-1}$ , reducing the coefficients modulo  $p$ .

**USAMO 1998/1.** The sets  $\{a_1, a_2, \dots, a_{999}\}$  and  $\{b_1, b_2, \dots, b_{999}\}$  together contain all the integers from 1 to 998. For each  $i$ ,  $|a_i - b_i| \in \{1, 6\}$ . For example, we might have  $a_1 = 18$ ,  $a_2 = 1$ ,  $b_1 = 17$ ,  $b_2 = 7$ . Show that  $\sum_1^{999} |a_i - b_i| \equiv 9 \pmod{10}$ .

**USAMO 1993/4.** Let  $r$  and  $s$  be odd positive integers. The sequence  $a_n$  is defined as follows:  $a_1 = r$ ,  $a_2 = s$ , and  $a_n$  is the greatest odd divisor of  $a_{n-1} + a_{n-2}$ . Show that, for sufficiently large  $n$ ,  $a_n$  is constant and find this constant (in terms of  $r$  and  $s$ ).

**USAMO 1991/3.** Let  $n$  be an arbitrary positive integer. Show that the following sequence is eventually constant modulo  $n$ :

$$2, \quad 2^2, \quad 2^{2^2}, \quad 2^{2^{2^2}}, \quad 2^{2^{2^{2^2}}}, \quad \dots$$

**IMO 1994/6.** Show that there exists a set  $A$  of positive integers with the following property: for any infinite set  $S$  of primes, there exist two positive integers  $m$  in  $A$  and  $n$  not in  $A$ , each of which is a product of  $k$  distinct elements of  $S$  for some  $k \geq 2$ .
