**Putnam 1985/A4.** Define a sequence  $\{a_i\}$  by  $a_1 = 3$  and  $a_{i+1} = 3^{a_i}$  for  $i \geq 1$ . Which integers between 00 and 99 inclusive occur as the last two digits in the decimal expansion of infinitely many  $a_i$ ?

**Putnam 1985/A5.** Let  $I_m = \int_0^{2\pi} \cos(x) \cos(2x) \cdots \cos(mx) dx$ . For which integers  $m$ ,  $1 \leq m \leq 10$  is  $I_m \neq 0$ ?

**Putnam 1985/A6.** If  $p(x) = a_0 + a_1x + \cdots + a_mx^m$  is a polynomial with real coefficients  $a_i$ , then set

$$\Gamma(p(x)) = a_0^2 + a_1^2 + \cdots + a_m^2.$$

Let  $f(x) = 3x^2 + 7x + 2$ . Find, with proof, a polynomial  $g(x)$  with real coefficients such that

- (i)  $g(0) = 1$ , and
- (ii)  $\Gamma(f(x)^n) = \Gamma(g(x)^n)$

for every integer  $n \geq 1$ .
