Contents

Preface	11
Acknowledgments	15
Course outlines	17
Part 1. The basics	19
Chapter 1. Fundamentals	21
Introduction	21
1. Structures and languages	24
2. The basic concepts	39
3. On existence of models and elementary submodels	67
4. Abstract classes	83
5. The Erdős-Rado Theorem	95
6. Applications of the compactness theorem	108
7. Some extensions of first-order logic	122
8. Model complete-theories	140
9. Skolemization	149
10. The filter of closed unbounded sets	155
11. Ultraproducts	164
12. Models of weak set theory	177
13. Ehrenfeucht-Fraïssé games	185
14. Two applications to algebra	188
15. Non-standard analysis*	194
16. A mathematical introduction to the book	195

17. When does a class have a structure theory? Shelah's thesis	201
Chapter 2. Types and indiscernibles	203
Introduction	203
1. $D(T)$ the diagram of the theory T	205
2. Saturated models	215
3. More on saturated models and the monster model	228
4. Definability and the Lascar group	239
5. Game theoretic characterization of elementary embedding and isomorphism	251
6. Saturation of ultraproducts	253
7. Keisler-Shelah's theorem*	253
8. More on model complete theories*	254
9. Indiscernibles and Ehrenfeucht-Mostowski models	255
10. Countable models and Henkin's omitting types theorem	270
11. PC-classes and more on omitting types	283
12. Shelah's Generalization of Ehrenfeucht-Mostowski models	298
13. $D(T)$ as a topological space*	301
14. The topology of Lascar's groups	307
15. More on existence, omitting types, and the completeness theorem	308
16. The Paris Harrington's theorem*	313
17. Basics of two cardinal theorems	314
18. More on two cardinal theorems*	320
19. Chang's conjecture and Jónsson algebras*	324
Chapter 3. Morley's Theorem	331
Introduction	331
1. Dimension in model theory	334
2. A rank function	336
3. Existence of indiscernibles, non-splitting and cohiers	344
4. \aleph_0 -stability	349
5. Primary models	355

6. Every model is saturated	360
7. Strongly minimal sets	365
8. Some properties of $ T ^+$ -categorical theories	372
9. Some properties of \aleph_0 -stable theories	377
10. The Baldwin Lachlan proof	378
11. Keisler's proof*	381
Chapter 4. Basics of Stability	383
Introduction	383
1. Basics	384
2. The order dichotomy	386
3. Sequences of indiscernibles	394
4. Noetherian topological spaces	401
Part 2. Stability and Simplicity	405
Chapter 5. Stability	407
Introduction	407
1. Ranks revisited	407
2. Characterizations of stable theories	419
3. Definability of types	422
4. On the function $D[\theta(\mathbf{x}; \mathbf{a}), \Delta, \mu^+]$	425
5. The finite cover property	442
6. Simple theories	444
Chapter 6. Stability in algebra	445
Introduction	445
1. Definable groups	445
2. Superstable fields are algebraically closed	446
3. Algebraic and model-theoretic dimensions	451
4. The indecomposability theorem	451
5. Model Theory of algebraically closed fields	451

6. An application to differentially closed fields*	454
Chapter 7. Strong splitting and averages	459
Introduction	459
1. The independence and strict order properties	460
2. Strong splitting and the stability spectrum	466
Chapter 8. Splitting, dividing and forking in arbitrary theories	469
Introduction	469
1. Forking	469
2. Indiscernible sequences based on a set*	482
Chapter 9. Forking calculus in simple theories	493
Introduction	493
1. General notion of independence	494
2. Forking in Simple Theories	503
3. Ranks and Simple Theories	510
4. Shelah's Boolean Algebra	520
5. Semi simple theories	529
Chapter 10. Forking in stable theories	531
Introduction	531
1. Finite equivalence relations theorem	531
2. The stability spectrum theorem	536
3. Chains of saturated models	539
4. Canonical bases and \mathfrak{C}^{eq}	539
Chapter 11. Orthogonality calculus	541
Introduction	541
1. Regular types	541
2. Unidimensional theories	541
Chapter 12. Morley's theorem for uncountable theories	543

Introduction	543
1. Weakly minimal formulas	543
2. Another proof	544
3. A third proof?	544
Chapter 13. Prime models	545
Introduction	545
1. Isolation notions and existence	545
2. Uniqueness	548
Chapter 14. The Hrushovski-Zilber group configuration	551
Introduction	551
1. Basics	551
2. Unidimensional theories are superstable	551
3. Laskowski's proof of categoricity	551
Part 3. Classification theory	553
Chapter 15. Classification theory for non-elementary classes	555
Introduction	555
Chapter 16. Classification theory for Abstract Elementary Classes	559
1. Fundamentals	559
2. \mathcal{K} -embeddings	567
3. A substitute for saturation	575
4. Abstract classes are PC-classes	577
5. The amalgamation property and the weak diamond	582
6. On pseudo elementary classes	607
7. Galois types	620
8. Minimal types	629
Chapter 17. Excellent classes	631
Introduction	631

1. The basic framework and concepts	640
2. Examples and applications	645
3. Good sets	645
4. Basic stability of the class of atomic models	645
5. Transferring results up and down	646
6. Categoricity	646
7. Non-excellence gives many models	646
 Chapter 18. The main gap	 647
Introduction	647
1. stable systems	647
2. otop and dop	648
3. good systems	648
4. Tree decomposition theorem	648
 Chapter 19. Non structure theory	 649
Introduction	649
1. Unstable theories	653
2. Unsuperstable theories and Boolean algebras	654
3. Combinatorial theorems on trees	666
4. The generalized order property	673
 Part 4. Survey and History	 681
 Chapter 20. Survey	 683
Introduction	683
1. The main gap (Shelah's great theorem)	683
2. Classification theory for non-elementary classes	685
3. Geometric stability (or the fine structure theory)	685
4. Lang-Mordell	685
5. Ax and Kochen	685
6. o -minimal theories	685

7. Abstract model theory	686
8. Finite model theory	687
9. Non standard analysis	687
Chapter 21. A miniguide to the literature	689
Chapter 22. Open Problems	691
Introduction	691
1. Classification theory for non-elementary classes	691
2. Shelah's categoricity conjecture	691
3. Main Gap for uncountable theories	691
4. Other problems	692
Chapter 23. Historical comments	695
Part 5. Appendix(s)	703
Appendix A. Elementary set theory	705
Introduction	705
1. Cardinal numbers	705
2. ordinals	707
3. More set theory	709
Appendix B. Combinatorial geometry	711
Introduction	711
1. Pregeometries (or Matroids)	711
2. Abstract dependence	718
3. Projective geometries	718
Bibliography	719
Index	729
