Contents

Preface	7
Chapter 1. Abstract Elementary Classes	9
Introduction	9
1. Abstract classes	9
2. Abstract Elementary Classes	15
Chapter 2. Some extensions of first-order logic	23
Introduction	23
1. $L_{\omega_1, \omega}$ and examples	23
2. Scott's theorem	27
3. The logics $L_{\infty, \mu}$, $L_{\lambda, \kappa}$ and $L_{\omega_1, \omega}(\mathbf{Q})$	29
Chapter 3. PC-classes and Hanf numbers	41
introduction	41
1. Silver's example	42
2. Morley's computation of the Hanf number	43
3. Shelah's Generalization of Ehrenfeucht-Mostowski models	50
Chapter 4. Abstract elementary classes are PC-classes	55
Preliminaries	55
1. Skolem Functions in Abstract Elementary Classes	57
Chapter 5. Galois types and saturation	61
Introduction	61
1. Types in Abstract Elementary Classes	62

2. Galois saturation and model-homogeneity are the same	66
3. Existence and uniqueness of model homogenous models	70
4. Limit models	73
Chapter 6. Getting amalgamation	77
Introduction	77
1. An amusing proof	77
2. universal models	78
3. Weaker forms of amalgamation	80
4. Few models imply the amalgamation property	81
5. On the function $\lambda \mapsto \text{IE}(\lambda, \mathcal{K})$	85
Chapter 7. Existence in $\mathcal{K}_{\lambda^+}$	89
Introduction	89
1. The extension property for pre-types	90
2. No models in λ^{++} make models in λ^+ fat	94
3. Various extension properties	96
4. Not having maximal models is cool too	97
Chapter 8. Minimal and reduced types	99
Introduction	99
1. Direct limits of models and Galois types	100
2. Existence of minimal types in K_{λ}^3 assuming $K_{\lambda^{+3}} = \emptyset$ and more	104
3. Existence of minimal types in K_{λ}^3 assuming Galois-stability and amalgamation	106
4. Galois stability and non-splitting	108
5. Using realizations of minimal types as a test of saturation	110
Chapter 9. The effect of assuming categoricity in $\lambda \geq \text{Hanf}(\mathcal{K})$	115
Introduction	115
1. μ -Galois satbility for all $\mu < \lambda$	115
2. Density of amalgamation bases	117
3. μ -Galois tameness for all $\mu < \lambda$	118

CONTENTS	5
Chapter 10. Shelah's categoricity conjecture is true for Tame AECs	119
Introduction	119
Chapter 11. Examples	121
Introduction	121
1. The random bi-partite graph	122
2. An AEC categorical in λ^{+n} but not in λ^{+n+1}	123
Appendix(s)	125
Appendix A. The filter of closed unbounded sets	127
Introduction	127
1. definitions and basics	127
2. Fodor's and Ulam Theorems	131
Appendix B. Models of weak set theory	137
1. Introduction	137
2. Transitive models	138
Appendix C. Weak diamond	145
1. Introduction	145
2. On diamonds	145
3. The small subsets of λ^+ is a normal ideal	152
4. The building-stones of many models	155
Appendix D. Historical remarks	159
Bibliography	161
Index	165
