# Contents

Preface	11
Acknowledgments	15
Course outlines	16
<b>Part 1. The basics</b>	<b>17</b>
Chapter 1. Fundamentals	19
Introduction	19
1. Structures and languages	21
2. The basic concepts	34
3. On existence of models and elementary submodels	60
4. The Erdős-Rado Theorem	80
5. Applications of the compactness theorem	93
6. Some extensions of first-order logic	107
7. Skolemization	121
8. The filter of closed unbounded sets	127
9. Ultraproducts	135
10. Models of weak set theory	148
11. Ehrenfeucht-Fraïssé games	154
12. Model complete-theories	156
13. Two applications to algebra*	165
14. Non-standard analysis*	171
15. A mathematical introduction to the book	172
16. When does a class have a structure theory? Shelah's thesis	177

Chapter 2. Types and indiscernibles	179
Introduction	179
1. $D(T)$ the diagram of the theory $T$	181
2. Saturated models	191
3. More on saturated models and the monster model	203
4. Definability and the Lascar group	213
5. Game theoretic characterization of elementary embedding and isomorphism	222
6. Saturation of ultraproducts	224
7. Keisler-Shelah's theorem*	224
8. More on model complete theories*	225
9. Indiscernibles and Ehrenfeucht-Mostowski models	226
10. Countable models and Henkin's omitting types theorem	240
11. More on omitting types	250
12. $D(T)$ as a topological space*	255
13. The topology of Lascar's groups	261
14. More on existence, omitting types, and the completeness theorem	262
15. The Paris Harrington's theorem*	267
16. Basics of two cardinal theorems	268
17. More on two cardinal theorems*	270
18. Chang's conjecture and Jónsson algebras*	273
Chapter 3. Morley's Theorem	279
Introduction	279
1. Dimension in model theory	281
2. A rank function	283
3. Existence of indiscernibles, non-splitting and cohiars	291
4. $\aleph_0$ -stability	296
5. Primary models	302
6. Every model is saturated	305
7. Strongly minimal sets	310

8. Some properties of $ T ^+$ -categorical theories	317
9. Some properties of $\aleph_0$ -stable theories	322
10. The Baldwin Lachlan proof	323
11. Keisler's proof*	325
 Chapter 4. Basics of Stability	 327
Introduction	327
1. Basics	328
2. The order dichotomy	330
3. Sequences of indiscernibles	337
4. Noetherian topological spaces	344
 <b>Part 2. Stability and Simplicity</b>	 347
 Chapter 5. Stability	 349
Introduction	349
1. Ranks revisited	349
2. Characterizations of stable theories	361
3. Definability of types	364
4. On the function $D[\theta(\mathbf{x}; \mathbf{a}), \Delta, \mu^+]$	367
5. The independence and strict order properties	384
6. The finite cover property	389
7. Simple theories	391
8. Basics of Forking	392
 Chapter 6. Stability in algebra	 395
Introduction	395
1. Definable groups	395
2. Superstable fields are algebraically closed	396
3. Algebraic and model-theoretic dimensions	401
4. The indecomposability theorem	401
5. Model Theory of algebraically closed fields	401

6. An application to differentially closed fields*	404
Chapter 7. Forking calculus in simple theories	409
Introduction	409
1. General notion of independence	410
2. Dividing and forking	419
3. Ranks and Simple Theories	428
4. Forking in Simple Theories	435
5. Shelah's Boolean Algebra	444
6. Semi simple theories	451
Chapter 8. More stability	455
Introduction	455
1. Finite equivalence relations theorem	455
2. The stability spectrum theorem	455
3. Chains of saturated models	457
4. Canonical bases and $\mathfrak{C}^{eq}$	457
Chapter 9. Prime models	459
Introduction	459
1. Isolation notions and existence	459
2. Uniqueness	462
Chapter 10. Orthogonality calculus	465
Introduction	465
1. Regular types	465
2. Unidimensional theories	465
Chapter 11. Morley's theorem for uncountable theories	467
Introduction	467
1. Weakly minimal formulas	467
2. Another proof	467

Chapter 12. The Hrushovski-Zilber group configuration	469
Introduction	469
1. Basics	469
2. Unidimensional theories are superstable	469
3. Laskowski's proof of categoricity	469
<b>Part 3. Classification theory</b>	<b>471</b>
Chapter 13. Classification theory for non elementary classes	473
Introduction	473
1. Fundamentals	476
2. $\mathcal{K}$ -embeddings	484
3. A substitute for saturation	491
4. Abstract classes are PC-classes	493
5. The amalgamation property and the weak diamond	497
6. On pseudo elementary classes	522
7. Types	536
8. Minimal types	545
Chapter 14. Excellent classes	547
Introduction	547
Chapter 15. The main gap	549
Introduction	549
1. stable systems	549
2. otop and dop	549
3. good systems	549
4. Tree decomposition theorem	549
Chapter 16. Non structure theory	551
Introduction	551
1. Unstable theories	555

2. Unsuperstable theories and Boolean algebras	556
3. Combinatorial theorems on trees	569
4. The generalized order property	576
<b>Part 4. Survey and History</b>	<b>585</b>
Chapter 17. Survey	587
Introduction	587
1. The main gap (Shelah's great theorem)	587
2. Classification theory for non-elementary classes	589
3. Geometric stability (or the fine structure theory)	589
4. Lang-Mordell	589
5. Ax and Kochen	589
6. $o$ -minimal theories	589
7. Abstract model theory	590
8. Finite model theory	591
9. Non standard analysis	591
Chapter 18. A miniguide to the literature	593
Chapter 19. Historical comments	595
<b>Part 5. Appendix(s)</b>	<b>597</b>
Appendix A. Elementary set theory	599
Introduction	599
1. Cardinal numbers	599
2. ordinals	602
3. More set theory	604
Appendix B. Combinatorial geometry	605
Introduction	605
1. Pregeometries (or Matroids)	605

CONTENTS

9

2. Abstract dependence

612

3. Projective geometries
