Contents

Preface	11
Acknowledgments	15
Course outlines	16
 Part 1. The basics	 17
 Chapter 1. Fundamentals	 19
Introduction	19
1. Structures and languages	21
2. The basic concepts	36
3. On existence of models and elementary submodels	63
4. The Erdős-Rado Theorem	83
5. Applications of the compactness theorem	96
6. Some extensions of first-order logic	110
7. Skolemization	127
8. The filter of closed unbounded sets	133
9. Ultraproducts	141
10. Models of weak set theory	154
11. Ehrenfeucht-Fraïssé games	160
12. Model complete-theories	162
13. Two applications to algebra*	171
14. Non-standard analysis*	177
15. A mathematical introduction to the book	178
16. When does a class have a structure theory? Shelah's thesis	183

Chapter 2. Types and indiscernibles	185
Introduction	185
1. $D(T)$ the diagram of the theory T	187
2. Saturated models	197
3. More on saturated models and the monster model	209
4. Definability and the Lascar group	220
5. Game theoretic characterization of elementary embedding and isomorphism	229
6. Saturation of ultraproducts	231
7. Keisler-Shelah's theorem*	231
8. More on model complete theories*	232
9. Indiscernibles and Ehrenfeucht-Mostowski models	233
10. Countable models and Henkin's omitting types theorem	247
11. PC-classes and more on omitting types	257
12. $D(T)$ as a topological space*	262
13. The topology of Lascar's groups	268
14. More on existence, omitting types, and the completeness theorem	269
15. The Paris Harrington's theorem*	274
16. Basics of two cardinal theorems	275
17. More on two cardinal theorems*	278
18. Chang's conjecture and Jónsson algebras*	281
Chapter 3. Morley's Theorem	287
Introduction	287
1. Dimension in model theory	289
2. A rank function	291
3. Existence of indiscernibles, non-splitting and cohiars	299
4. $\aleph_0$ -stability	304
5. Primary models	310
6. Every model is saturated	315
7. Strongly minimal sets	320

8. Some properties of $ T ^+$ -categorical theories	327
9. Some properties of $\aleph_0$ -stable theories	332
10. The Baldwin Lachlan proof	333
11. Keisler's proof*	335
Chapter 4. Basics of Stability	337
Introduction	337
1. Basics	338
2. The order dichotomy	340
3. Sequences of indiscernibles	347
4. Noetherian topological spaces	354
Part 2. Stability and Simplicity	357
Chapter 5. Stability	359
Introduction	359
1. Ranks revisited	359
2. Characterizations of stable theories	371
3. Definability of types	374
4. On the function $D[\theta(\mathbf{x}; \mathbf{a}), \Delta, \mu^+]$	377
5. The independence and strict order properties	394
6. The finite cover property	399
7. Simple theories	401
8. Basics of Forking	402
Chapter 6. Stability in algebra	405
Introduction	405
1. Definable groups	405
2. Superstable fields are algebraically closed	406
3. Algebraic and model-theoretic dimensions	411
4. The indecomposability theorem	411
5. Model Theory of algebraically closed fields	411

6. An application to differentially closed fields*	414
Chapter 7. Forking calculus in simple theories	419
Introduction	419
1. General notion of independence	420
2. Dividing and forking	429
3. Ranks and Simple Theories	438
4. Forking in Simple Theories	445
5. Shelah's Boolean Algebra	454
6. Semi simple theories	461
Chapter 8. More stability	465
Introduction	465
1. Finite equivalence relations theorem	465
2. The stability spectrum theorem	465
3. Chains of saturated models	467
4. Canonical bases and $\mathfrak{C}^{eq}$	467
Chapter 9. Prime models	469
Introduction	469
1. Isolation notions and existence	469
2. Uniqueness	472
Chapter 10. Orthogonality calculus	475
Introduction	475
1. Regular types	475
2. Unidimensional theories	475
Chapter 11. Morley's theorem for uncountable theories	477
Introduction	477
1. Weakly minimal formulas	477
2. Another proof	477

Chapter 12. The Hrushovski-Zilber group configuration	479
Introduction	479
1. Basics	479
2. Unidimensional theories are superstable	479
3. Laskowski's proof of categoricity	479
Part 3. Classification theory	481
Chapter 13. Classification theory for non-elementary classes	483
Introduction	483
1. Fundamentals	486
2. $\mathcal{K}$ -embeddings	494
3. A substitute for saturation	502
4. Abstract classes are PC-classes	504
5. The amalgamation property and the weak diamond	508
6. On pseudo elementary classes	533
7. Types	547
8. Minimal types	556
Chapter 14. Excellent classes	557
Introduction	557
Chapter 15. The main gap	559
Introduction	559
1. stable systems	559
2. otop and dop	559
3. good systems	559
4. Tree decomposition theorem	559
Chapter 16. Non structure theory	561
Introduction	561
1. Unstable theories	565

2. Unsuperstable theories and Boolean algebras	566
3. Combinatorial theorems on trees	579
4. The generalized order property	586
Part 4. Survey and History	595
Chapter 17. Survey	597
Introduction	597
1. The main gap (Shelah's great theorem)	597
2. Classification theory for non-elementary classes	599
3. Geometric stability (or the fine structure theory)	599
4. Lang-Mordell	599
5. Ax and Kochen	599
6. ω -minimal theories	599
7. Abstract model theory	600
8. Finite model theory	601
9. Non standard analysis	601
Chapter 18. A miniguide to the literature	603
Chapter 19. Historical comments	605
Part 5. Appendix(s)	607
Appendix A. Elementary set theory	609
Introduction	609
1. Cardinal numbers	609
2. ordinals	612
3. More set theory	614
Appendix B. Combinatorial geometry	615
Introduction	615
1. Pregeometries (or Matroids)	615

CONTENTS	9
2. Abstract dependence	622
3. Projective geometries	622
Bibliography	623
Index	635
