Putnam 1999/B4. Let $f$ be a real function with a continuous third derivative such that $f(x), f^{\prime}(x), f^{\prime \prime}(x), f^{\prime \prime \prime}(x)$ are positive for all $x$. Suppose that $f^{\prime \prime \prime}(x) \leq f(x)$ for all $x$. Show that $f^{\prime}(x)<2 f(x)$ for all $x$.

Putnam 1999/B5. For an integer $n \geq 3$, let $\theta=2 \pi / n$. Evaluate the determinant of the $n \times n$ matrix $I+A$, where $I$ is the $n \times n$ identity matrix and $A=\left(a_{j k}\right)$ has entries $a_{j k}=\cos (j \theta+k \theta)$ for all $j, k$.

Putnam 1999/B6. Let $S$ be a finite set of integers, each greater than 1 . Suppose that for each integer $n$ there is some $s \in S$ such that $\operatorname{gcd}(s, n)=1$ or $\operatorname{gcd}(s, n)=s$. Show that there exist $s, t \in S$ such that $\operatorname{gcd}(s, t)$ is prime.
