## 1 Problems

**Putnam 2012/A4.** Let  $q$  and  $r$  be integers with  $q > 0$ , and let  $A$  and  $B$  be intervals on the real line. Let  $T$  be the set of all  $b + mq$  where  $b$  and  $m$  are integers with  $b$  in  $B$ , and let  $S$  be the set of all integers  $a$  in  $A$  such that  $ra$  is in  $T$ . Show that if the product of the lengths of  $A$  and  $B$  is less than  $q$ , then  $S$  is the intersection of  $A$  with some arithmetic progression.

**Putnam 2012/A5.** Let  $\mathbb{F}_p$  denote the field of integers modulo a prime  $p$ , and let  $n$  be a positive integer. Let  $v$  be a fixed vector in  $\mathbb{F}_p^n$ , let  $M$  be an  $n \times n$  matrix with entries of  $\mathbb{F}_p$ , and define  $G : \mathbb{F}_p^n \rightarrow \mathbb{F}_p^n$  by  $G(x) = v + Mx$ . Let  $G^{(k)}$  denote the  $k$ -fold composition of  $G$  with itself, that is,  $G^{(1)}(x) = G(x)$  and  $G^{(k+1)}(x) = G(G^{(k)}(x))$ . Determine all pairs  $p, n$  for which there exist  $v$  and  $M$  such that the  $p^n$  vectors  $G^{(k)}(0)$ ,  $k = 1, 2, \dots, p^n$  are distinct.

**Putnam 2012/A6.** Let  $f(x, y)$  be a continuous, real-valued function on  $\mathbb{R}^2$ . Suppose that, for every rectangular region  $R$  of area 1, the double integral of  $f(x, y)$  over  $R$  equals 0. Must  $f(x, y)$  be identically 0?
