## 1 Problems

Putnam 2009/B4. Say that a polynomial with real coefficients in two variables, $x, y$, is balanced if the average value of the polynomial on each circle centered at the origin is 0 . The balanced polynomials of degree at most 2009 form a vector space $V$ over $\mathbb{R}$. Find the dimension of $V$.

Putnam 2009/B5. Let $f:(1, \infty) \rightarrow \mathbb{R}$ be a differentiable function such that

$$
f^{\prime}(x)=\frac{x^{2}-f(x)^{2}}{x^{2}\left(f(x)^{2}+1\right)} \quad \text { for all } x>1
$$

Prove that $\lim _{x \rightarrow \infty} f(x)=\infty$.
Putnam 2009/B6. Prove that for every positive integer $n$, there is a sequence of integers $a_{0}, a_{1}, \ldots, a_{2009}$ with $a_{0}=0$ and $a_{2009}=n$ such that each term after $a_{0}$ is either an earlier term plus $2^{k}$ for some nonnegative integer $k$, or of the form $b \bmod c$ for some earlier positive terms $b$ and $c$. [Here $b \bmod c$ denotes the remainder when $b$ is divided by $c$, so $0 \leq(b \bmod c)<c$.]
