

# Even more advanced Putnam training

Po-Shen Loh

24 September 2010

**Solution:**

## 1 Announcements

- Wed next week
- CMU has only ever had max 2 in the HM.
- Scores required for HM, around the top 75 students.

	year	score
• In order to make rank 70:	2009	53
	2008	60
	2007	48
	2006	56
	2005	49

	Q	pts	
• Suggested score breakdown	1	10	So if only solve 5 questions, get 56 points
	2	10	
	3	10	
	4	1	
	5	1	
	6	1	
	tot	33	

## 2 Problems

**Putnam 2001/A1.** Consider a set  $S$  and a binary operation  $*$ , i.e., for each  $a, b \in S$ ,  $a * b \in S$ . Assume  $(a * b) * a = b$  for all  $a, b \in S$ . Prove that  $a * (b * a) = b$  for all  $a, b \in S$ .

**Solution:** FIX

**Putnam 2001/B2.** Find all pairs of real numbers  $(x, y)$  satisfying the system of equations

$$\begin{aligned}\frac{1}{x} + \frac{1}{2y} &= (x^2 + 3y^2)(3x^2 + y^2) \\ \frac{1}{x} - \frac{1}{2y} &= 2(y^4 - x^4)\end{aligned}$$

**Solution:** FIX

**Putnam 2001/A3.** For each integer  $m$ , consider the polynomial

$$P_m(x) = x^4 - (2m + 4)x^2 + (m - 2)^2.$$

For what values of  $m$  is  $P_m(x)$  the product of two nonconstant polynomials with integer coefficients?

**Solution:** FIX
