## 1 Problems

**Putnam 2000/B1.** Let  $a_j, b_j, c_j$  be integers for  $1 \leq j \leq N$ . Assume for each  $j$ , at least one of  $a_j, b_j, c_j$  is odd. Show that there exist integers  $r, s, t$  such that  $ra_j + sb_j + tc_j$  is odd for at least  $4N/7$  values of  $j$ ,  $1 \leq j \leq N$ .

**Putnam 2000/B2.** Prove that the expression

$$\frac{\gcd(m, n)}{n} \binom{n}{m}$$

is an integer for all pairs of integers  $n \geq m \geq 1$ .

**Putnam 2000/B3.** Let  $f(t) = \sum_{j=1}^N a_j \sin(2\pi jt)$ , where each  $a_j$  is real and  $a_N$  is not equal to 0. Let  $N_k$  denote the number of zeroes (including multiplicities) of  $\frac{d^k f}{dt^k}$ . Prove that

$$N_0 \leq N_1 \leq N_2 \leq \dots \text{ and } \lim_{k \rightarrow \infty} N_k = 2N.$$

[Editorial clarification: only zeroes in  $[0, 1)$  should be counted.]
