Dario Amodei (CEO, Anthropic):

I have in mind an AI model ...

In terms of pure intelligence, it is smarter than a Nobel Prize winner across most relevant fields ...

In addition to just being a “smart thing you talk to”, it has all the “interfaces” available to a human working virtually ...

It does all of these tasks with, again, a skill exceeding that of the most capable humans in the world.

Dario Amodei (CEO, Anthropic):

It can be given tasks that take hours, days, or weeks to complete, and then goes off and does those tasks autonomously, in the way a smart employee would, asking for clarification as necessary.

It does not have a physical embodiment ... but it can control existing physical tools, robots, or laboratory equipment through a computer; in theory it could even design robots or equipment for itself to use.

Dario Amodei (CEO, Anthropic):

The resources used to train the model can be repurposed to run millions of instances of it ...

Each of these million copies can act independently on unrelated tasks, or if needed can all work together in the same way humans would collaborate ...

We could summarize this as a “**country of geniuses in a datacenter**”.

Liang Wenfeng (CEO, Deepseek):

Q: Why?

“Curiosity about the boundaries of AI capabilities.”

Geometric Median

Which point minimizes total distance?

Fermat Point

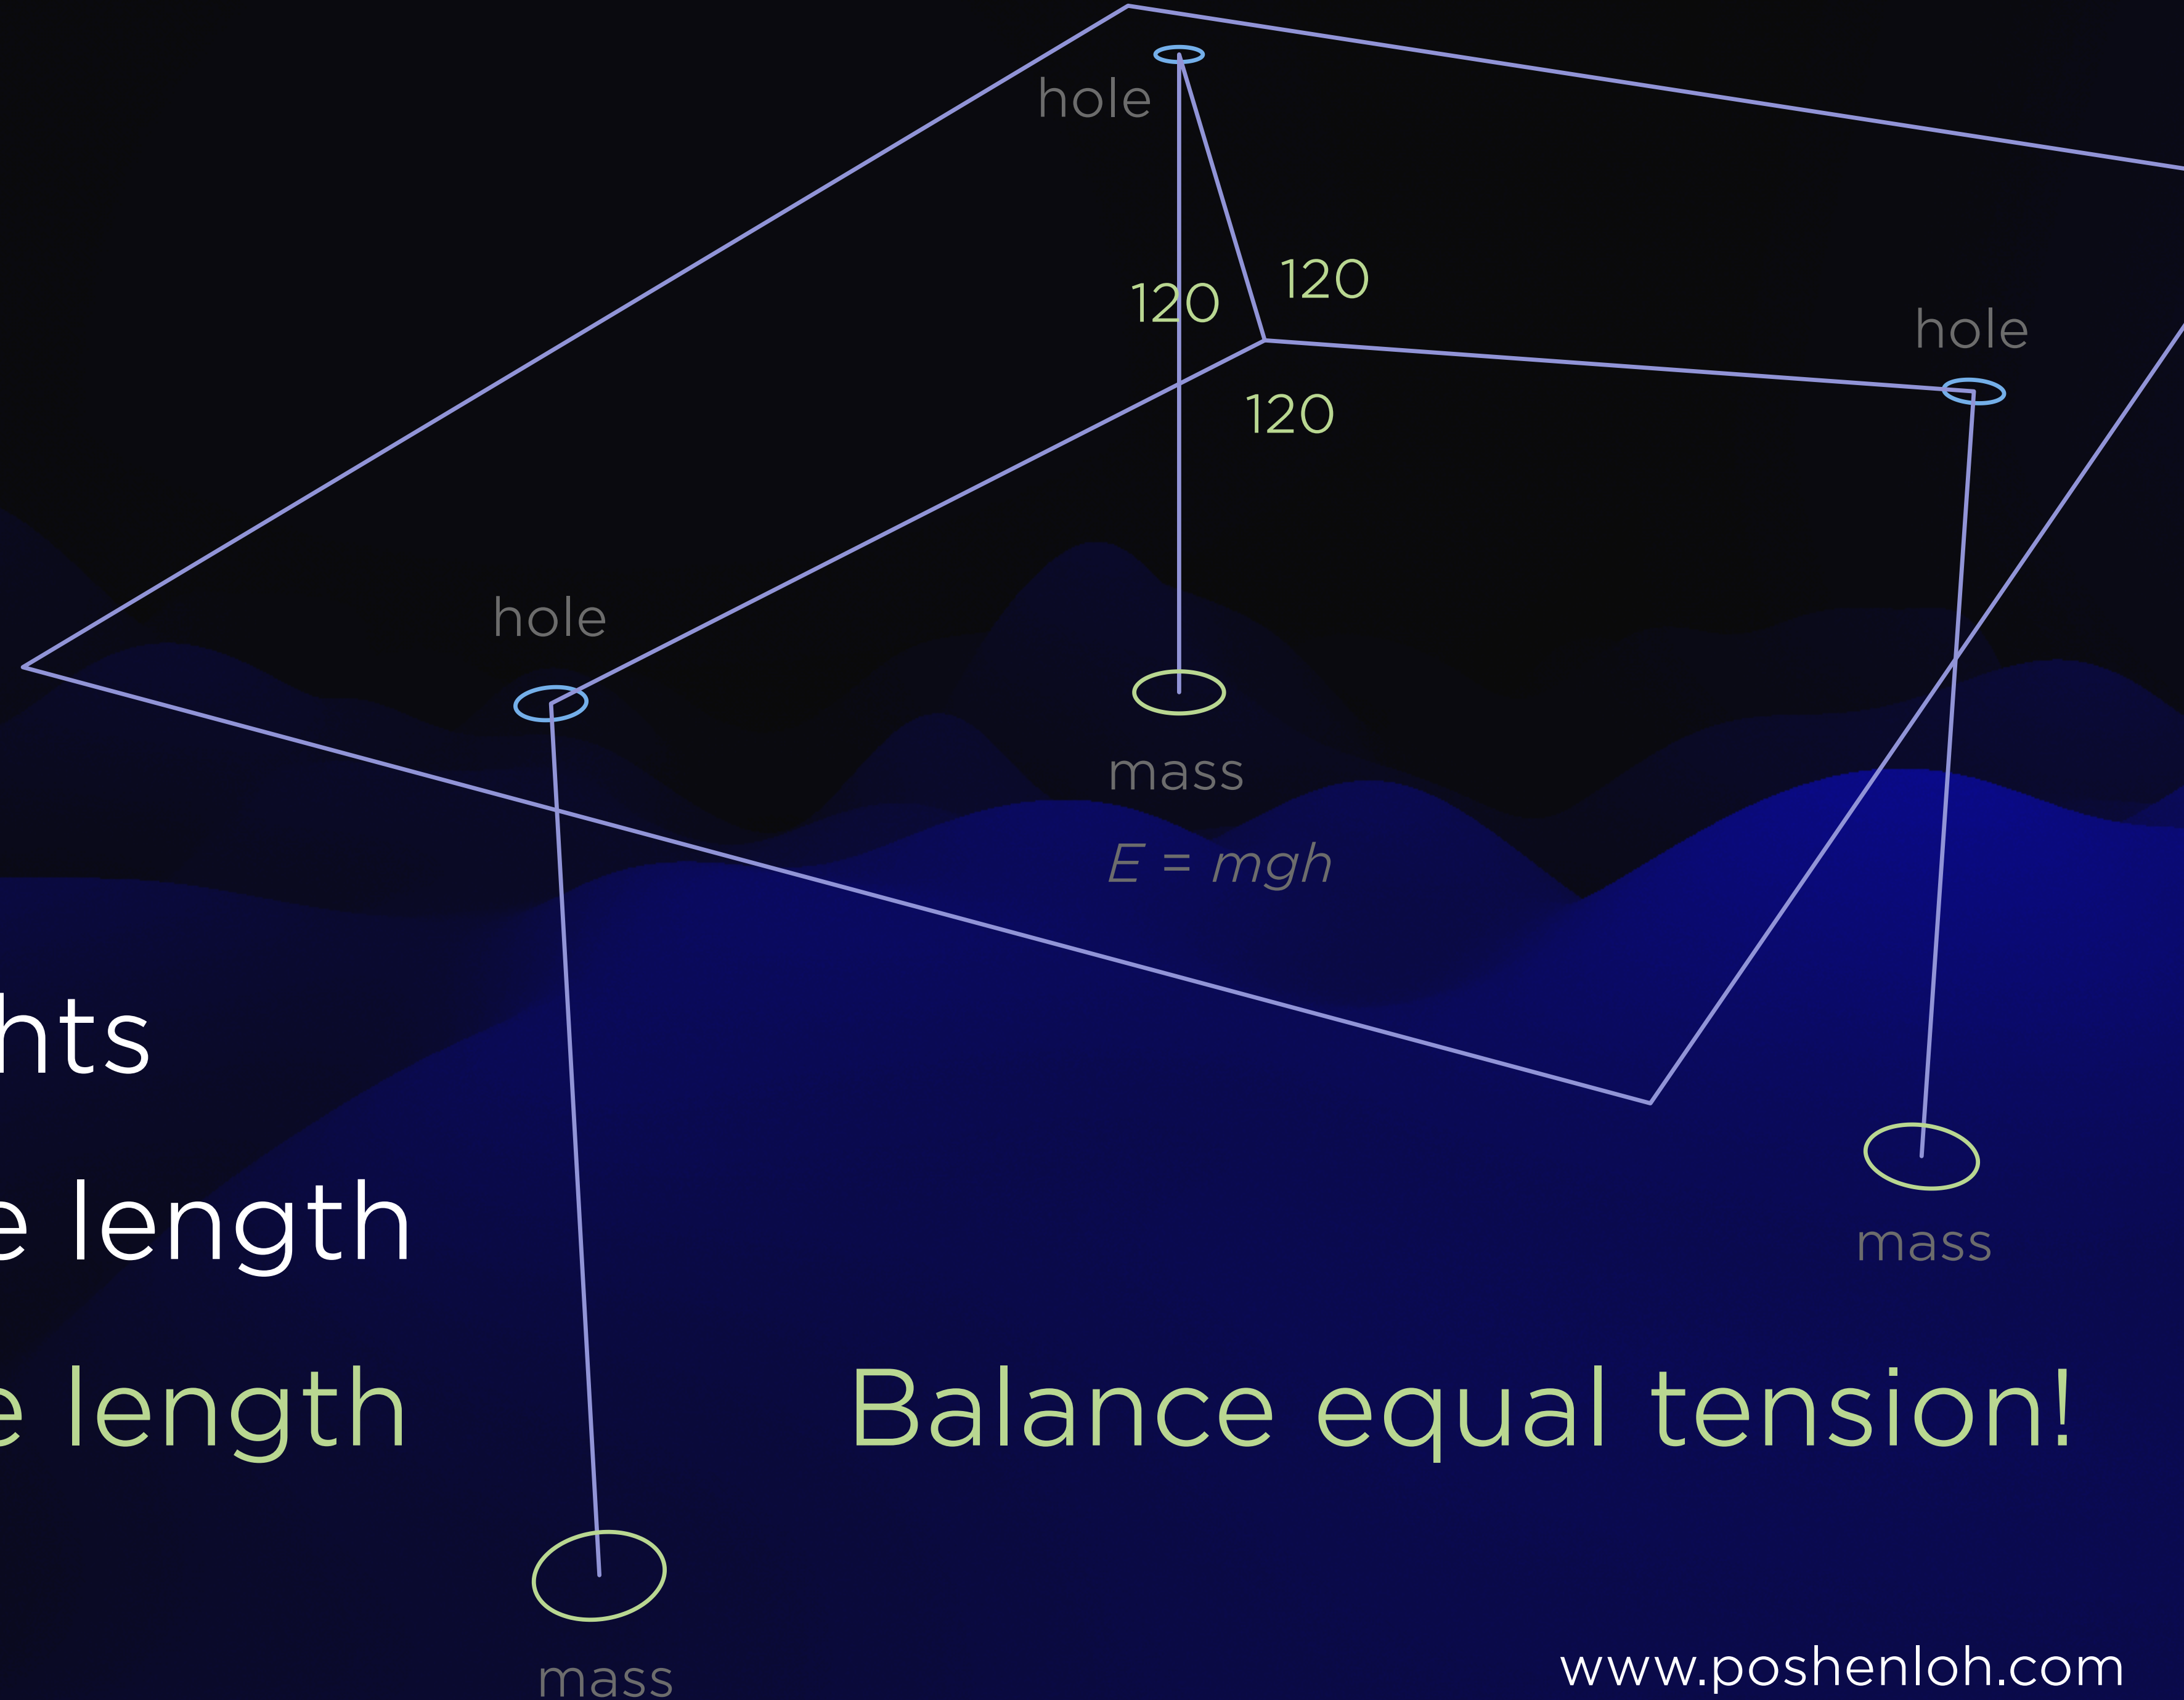

Equilibrium?

Min energy

Min sum of heights

Max total dangle length

Min total surface length

Balance equal tension!
